DETAILED ACTION

Receipt is acknowledged of Applicant's amendment filed on March 15, 2004.

Claims 15-25 are presented for examination.

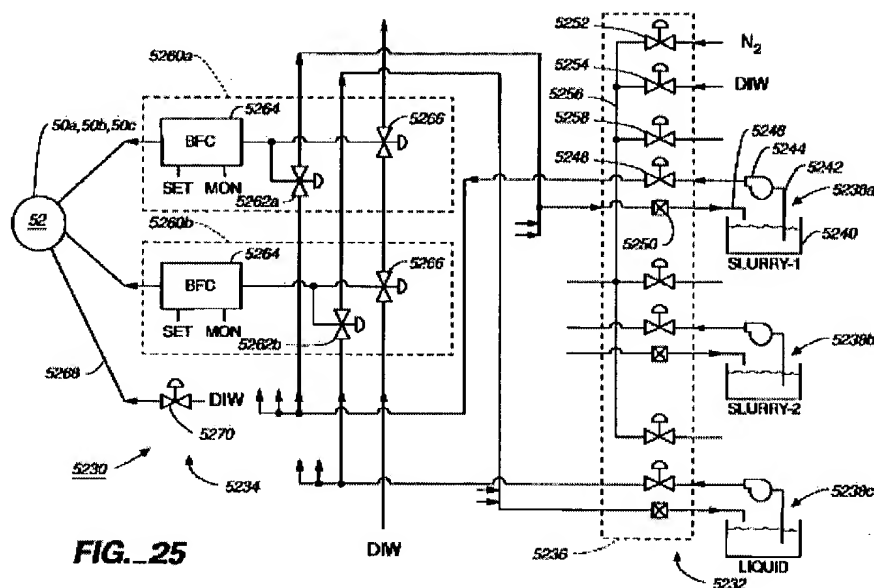

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 15-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Perlov et al.'6,086,457 in view of Togawa et al.'6,413,154.

With reference to Figs. 19-25, col. 32, line 18, to col. 34, line 26, Perlov discloses the claimed invention including: a) a first CMP polisher 50a; b) second CMP polisher 50b; b) a plurality of slurry suppliers 5236a-c which are interchangeably supplied to polishers 50a-c. However, Perlov is silent about which slurry suppliers is supplying oxidizing-free medium and which slurry supplier is supplying oxidizing medium.

U.S. Patent

Sheet 24 of 74

6,086,457

With reference to Fig. 4, col. 3, line 49 to col. 4, line 3, Togawa teaches that stock solution may include an acidic, alkaline or neutral solution containing abrasive particles such as silica-gel, depending on the nature of the workpiece, and dilution liquid is normally deionized water containing no harmful impurities.

US 6,413,154 B1

Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the Perlov apparatus with the teaching of employing different stock solutions with oxidizing liquid or oxidizer-free liquid as taught by Togawa to suit the polishing apparatus for optimum performances, depending on the nature of the workpiece.

Response to Arguments

3. Applicant's arguments filed March 15, 2004 have been fully considered but they are not persuasive. In response to Applicant's argument that the combined references do not teach the sequence of delivering oxidizer free medium prior to delivering oxidizer medium to wafer, in accordance with MPEP 2114 under the heading **"Manner of operating the device does not differentiate apparatus claim from the prior art"**, a claim containing "a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus" if the prior art apparatus teaches all the structural limitations of the claims. Ex parte Masham, 2 USPQ2d 1647. In MPEP 2114, under the heading **"Material or Article Worked Upon by Apparatus"**, the manner or method in which the claimed machine is to be utilized is not germane to the issue of patentability of the machine itself, In re Casey, 370, F.2nd 576, 152 USPQ 235 (CCPA 1967). Thus, the 103 rejection which teaches all the structural limitations set forth in the claims is believed to be proper.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
